

Best Practices for Sustainability

Encourage the use of eco-friendly accommodation options, such as hostels or hotels that have implemented sustainable practices. For this, partners will seek alliances with sustainable service providers that promote sustainable practices in their operations and supply chain.

When purchasing materials or services for your project, choose environmentally friendly and sustainable options, products with reduced packaging and/or recyclable. This includes implementing recycling programmes for paper, cardboard, plastic and other materials in the office through the three Rs: Reduce, Reuse, Recycle.

BEST PRACTICES FOR PARTNERSHIPS

Well-Defined Contracts and Agreements: Draft clear and detailed contracts and agreements outlining expectations, contributions, and commitments of each partner. These documents should be agreed upon and signed by all involved parties. A clear contractual framework provides a solid foundation for the partnership, helps prevent misunderstandings, and provides a mechanism for dispute resolution if needed.

Clear Communication and Information Sharing: Provide a detailed communication plan within the partnership. Clearly define communication channels, responsibilities, and timelines. Ensure that all relevant information is shared in a timely and transparent manner among partners to avoid misunderstandings and ensure everyone is aligned with common goals.
